Exhibit A
Scope of Services

EXHIBIT A
SCOPE OF SERVICES FOR:

FC-7611, CITYWIDE PEST CONTROL SERVICES

OBJECTIVE

The City of Atlanta (the "City"), Department of Procurement ("DOP") on behalf of the Office of Enterprise & Assets Management ("OEAM") is seeking a qualified firm to provide aggressive and comprehensive pest control service for various City facilities. It is the City's desire to use Integrated Pest Management ("IPM"), as the strategy for control of pests in and around City facilities, while minimizing health hazards to people from pesticide exposure. The following description details the COA's scope and type of IPM services to be rendered.

BACKGROUND

IPM, also known as reduced-risk pest management, encourages long-term pest prevention and suppression through biological controls, habitat manipulation, use of resistant plant varieties, improved landscape and building hygiene and structural repair and pest barriers. IPM sanctions synthetic chemical pesticides only as a last resort and only with the least toxic chemicals available that perform the task. IPM depends on understanding a pest's environmental requirements and natural enemies in order to facilitate less toxic pest control and requires ongoing monitoring for pests to ensure that small infestations do not become large ones. IPM seeks to minimize pest concerns while minimizing human health, environmental and financial risks. Populations of termites, carpenter ants and other wood destroying organisms, mosquitoes, birds, bats, snakes and all other vertebrates other than commensal rodents as well as pests that feed on outdoor vegetation and large outdoor populations of fire ants are **excluded** from this scope of services.

1.0 MINIMUM REQUIREMENTS

The Proponent shall furnish all supervision, labor, materials and equipment necessary to evaluate, monitor, and provide pest management services for the City buildings. Pest control methods should first strive to use non-chemical controls such as trapping and pest proofing, followed by chemical controls only if non-chemical methods fail.

1.1 Proponents must possess the following licenses:

- Certified Commercial Pesticide Applicator; and
- Registered Technicians

The Proponent must be in compliance with all federal, state, and local pest control operator requirements and regulations and maintain current licenses.

All Proponent personnel providing on-site pest control services must be under the direct supervision of a person licensed to apply pesticides.

2.0 MINIMUM QUALIFICATIONS AND REQUIRED SUBMITTALS

Using IPM strategies, the Proponent will control structural pest to include:

- Insects and other arthropods: These include ants, gnats, cockroaches, yellow jackets and other wasps and bees, spiders, mites, and any other arthropod pest not specifically excluded from the contract;
- Mice and rats: The contractor shall adequately suppress rats and mice found inside and outside buildings. Pick-up and proper disposal of dead vertebrates is also included in this scope of work;
- Removal of stinging insects: the contractor will remove nests of stinging insects within the property boundaries of specified buildings. The contractor will work with Environmental Compliance to identify options where bee hives can be relocated and not destroyed; and
- Reduce pest problem hotspots with the goal of solving structural and hygiene challenges so that facilities currently requiring a monthly service can reduce their service needs to on-call service only.

2.1 Initial Inspections of Facilities

The Proponent shall conduct a thorough initial inspection of each building or site with ten (10) days of contract execution. The purpose of the initial inspections is for the Proponent to evaluate the pest control needs of all premises and to identify problem areas and any equipment, structural features or management practices that are contributing to pest infestation. Access to building space shall be coordinated with the building manager. The building manager will inform the Proponent of any restriction or areas requiring special scheduling (i.e. day care centers).

2.2 Submission of Pest Control Plan shall consist of five (5) parts as follows:

- 2.2.1 *Proposed methods and equipment of service*** - the Contract shall provide a summary of proposed control methods including current labels and MSDS of all pesticides to be used, brand names of pesticide application equipment, rodent bait boxes, insect and rodent trapping devices, pest monitoring devices, pest surveillance and detection equipment and any other pest control devices or equipment that may be used to provide service. The summary can be made available in electronic form or print form. If made available in electronic form, software must be provided to allow printing of the electronic forms. If the electronic form contains pest control products that will not be used, then a printed list of those proposed to be used at City facilities must be provided to the City.

2.2.3 Proposed method for monitoring and surveillance -the Proponent shall describe methods and procedures to be used for identifying sites of pest harborage and access and for making objective assessment of pest population levels throughout the term of the contract. Monitoring devices should be placed in kitchen areas. In addition, the contract will work with building manager to establish population levels that constitute unacceptable levels of pest presence in City facilities.

2.2.4 Service schedule for each facility – the Proponent shall provide complete service schedules that include planned frequency of Proponent visits, and specified day(s) of the week for Proponent visits.

2.2.5 Description of any structural or operational changes that would facilitate the pest control effort – The Proponent shall describe site-specific solution for observed food sources of pest food, water, harborage and access.

2.2.6 Commercial applicator or technician license – the Proponent shall provide a current list of names along with photocopies of commercial applicator license the technician's certification card for every Proponent employee who will be performing on-site services to the City.

3.0 GENERAL CODITIONS

3.1 USE OF PESTICIDES

The Proponent shall be responsible for application of pesticides according to the label. All pesticides used by the Proponent must be registered with the US Environmental Protection Agency ("EPA") and the State of Georgia. Transport, handling and use of all pesticides shall be in strict accordance with the manufacturer's label instructions and all applicable federal, state, and local laws and regulations. The Proponent shall adhere to the following rules for pesticide selection and use of *Non-pesticide Products*. The Proponent shall use non-pesticide methods of control wherever possible. For example:

- Allergen-filtering portable vacuums rather than pesticide sprays shall be used for initial cleanouts of cockroach infestations, for swarming (winged) and termites and for control of spiders in webs wherever appropriate; and
- Trapping devices rather than pesticidal sprays shall be used for indoor fly control wherever appropriate.

Application by Need: Pesticide applications shall be according to need and not by schedule. As a general rule, application of pesticides in any inside or outside area shall not occur unless visual inspections or monitoring devices indicate the presence of pests in that specified area. Preventive pesticide treatment of areas where surveillance indicates a potential insect or rodent infestation is acceptable on a case by case basis, as approved by the Facility Manager.

Pesticide Products and Their Use: When it is determined that a pesticide must be used to obtain adequate control, the Proponent shall employ the least hazardous material, most precise application technique and minimum quantity of pesticide necessary to achieve control. When selecting pesticide products, highest priority should be given to pesticides with a signal word of caution or category II and IV classification. Containerized and other types of crack and crevice applied bait formulations, rather than sprays, shall be used for cockroach control and ant control wherever appropriate. As a general rule, liquid aerosol or dust formulations shall be applied only as crack and crevice treatments with application devices specifically designed or modified for this purpose. Crack and crevice treatment is defined in this contract as an application of small amounts of insecticides into cracks and crevices in which insects hide or through which they may enter a building.

Application of pesticide liquid, aerosol or dust to exposed surfaces and pesticide sprays (including fogs, mists, and ultra-low volume applications) shall be restricted to unique situations where no alternative methods are practical.

The Proponent shall obtain the approval of the Facility Manager prior to any application of pesticide liquid, aerosol or dust to exposed surfaces or any space spray treatment. The Proponent shall take all necessary precautions to ensure student and staff safety and all necessary steps to ensure the containment of the pesticide to the site of application.

3.2 RODENT CONTROL

As a general rule, rodent control inside occupied buildings shall be accomplished by trapping devices. All such devices shall be concealed out of the general view and in protected areas so as not to be affected by routine cleaning or other operations. Trapping devices shall be checked on a schedule approved by Facility Management staff. Trapping shall not be performed during periods when maintenance will be delayed by holidays, weekends, etc. The Proponent or OEAM staff shall be responsible partly for disposing of all trapped rodents and all rodent carcasses in an appropriate and timely manner.

In circumstances when rodenticides are deemed essential for adequate rodent control inside occupied buildings, the Proponent shall obtain the approval of the Facility Manager prior to making any interior rodenticide treatment. All rodenticides, regardless of packaging shall be placed in EPA approved, tamper resistant bait boxes to be inaccessible to children, pets, wildlife and domestic animals. In case of emergency where other rodenticide formulations or placements are deemed necessary, written permission from Facility Management must be obtained before use.

Frequency of bait box servicing shall depend upon the level of rodent infestation. All bait boxes shall be maintained in accordance with EPA regulations, with an emphasis on the safety of non target organisms. The Proponent shall adhere to the following rules:

- All bait boxes shall be placed out of view, in locations where they will not be disturbed by routine operations;
- Bait boxes must be securely locked or fastened shut;

- Bait shall always be placed in the baffle protected feed chamber of the box and never in the runway of the box;
- All bait boxes shall be securely attached or anchored to the floor, ground, wall or other surface, so the box cannot be picked up or moved;
- Use paraffinized bait blocks instead of pelletized bait formulations to reduce the likelihood that a rodent could remove the bait; and
- All bait boxes should be labeled with the Proponent's business name and address and date by the Proponent's technician at the time of installation and at each servicing.

3.3 TIMES OF SERVICE AND SCHEDULES

Normal business hours for City offices are 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding holidays listed below. **The Proponent must submit a model schedule that will be the basis of the City's plan.** The schedule should include information on timelines and regularity of visits. The frequency of treatments for each location should be provided for the locations provided in this solicitation. **The Proponent should keep in mind work in these public facilities may require after normal business hours or weekends.**

The COA observes the following holidays:

- New Year's Day
- Martin Luther King Jr's Birthday
- Memorial Day
- Independence Day
- Labor Day
- Veteran's Day
- Thanksgiving Day and the day after
- Christmas Day

When any of the above holidays fall on a Saturday, the following Friday is observed. When the holiday falls on Sunday the following Monday is observed.

3.4 RECORD KEEPING

The Proponent shall be responsible for maintaining a pest control log book or file for each building or site specified in this RFP. These records shall be kept on City property

(Facility Management Office) and maintained on each visit by the Proponent. Each logbook shall contain:

3.4.1 *Pest Control Plan* – a copy of the Proponent's approved Plan for the facility, including labels and MSDS sheet for all pesticides used in the building, brand names for all pest control devices and equipment used in the building and the Proponent's service schedule for the buildings.

3.4.2 *Service and Compliance Logs* – a log book for recording service visit activities, including complaints from staff concerning pest sightings and response, pesticide applications, and other information must be maintained as well. A floor plan of the site must also be recorded showing the number and location of monitoring traps and results of trap inspection such as

- a) Date checked;
- b) Trap number and location;
- c) Trap condition;
- c) Number and species of pests trapped;
- d) Other evidence of pests (cast skins, feces, rub marks, etc) or damage; and
- f) Need for pest management

All services must be recorded in the log book and should show times in and out and signature of Proponent at each visit.

3.4.3 *Service Report Forms* – customer copies of the Proponent's service Report Form, documenting all information on pesticide applications, sightings, sanitation status of building maintenance needs should be forwarded to the OEAM facilities director monthly.

3.5 HEALTH AND SAFETY

The Proponent shall observe all safety precaution throughout the performance of this contract and shall assume full responsibility and liability for compliance with all applicable regulations pertaining to the health and safety of personnel during the execution of work and shall hold the City harmless for any action on its part or that of its employees that result in illness, injury or death.

Contractor's Check List

1.0 INTRODUCTION

The Office of Enterprise Assets Management (OEAM) manages a number of facilities that provide for work, learning, and recreation.

OEAM is committed to providing a safe and healthy working environment for citizens, employees and contractors. It is our mission to ensure all activities in City of Atlanta facilities are carried out safely and in full compliance with relevant laws.

Unsafe work practices can result in serious injury and damage to property. These damages can result in large financial penalties for employees and contractors alike.

2.0 WHAT IS A HAZZARD

A 'hazard' is something that may cause harm or injury. Workplace hazards include moving parts of machinery, working at heights, slippery floors, electric energy, excessive noise, toxic or flammable substances, and/or lifting heavy objects.

3.0 WHAT IS A RISK

A 'risk' is the likelihood that a hazard will cause specific harm or injury to persons or damage to property.

3.1 WHAT IS A RISK ASSESSMENT

A Risk Assessment is the process of identifying safety and health hazards associated with work. Assessing the level of risk involved, and prioritizing measures to control the hazards and reduce the risks.

3.2 WHAT IS RISK MANAGEMENT

Risk Management, like risk assessment, involves assessments of risk associated with any work activity. It also includes control and monitoring of such risks.

3.3 CONTRACTOR'S BASIC RESPONSIBILITY

Everyone working on sites under the purview of OEAM is obligated to take reasonable care to:

- * Ensure the health and safety of the employees and public;
- * Avoid risking the safety and health of any other person;
- * Assist new site personnel in recognizing job hazards and following necessary procedures;
- * Ensure their work site is safe for themselves and others;

- * Practice good site housekeeping to minimize risk of avoidable accidents;
- * Identify OEAM before starting any work;
- * Be knowledgeable of all activities which could potentially pose a safety threat, hazard or danger to the safety of any person; and
- * Immediately take effective action to eliminate any safety hazard.

In case of a spill, the contractor must contact OEAM followed by a written incident report to OEAM within twenty-four (24) hours of the occurrence. The written report must include the following information:

- *Description of the spill and estimated quantity spilled;
- *Date and time of the spill;
- *Copy of MSDS for material spilled; and
- *Steps taken to reduce, eliminate, and prevent recurrence of the spill.

6.8 HAZARDOUS CHEMICAL TRANSPORTATION

At no time should hazardous material be transported in a manner that could result in an unsafe condition for the public. The transportation of hazardous material shall be conducted in accordance with the Department of Transportation (DOT) Hazardous Materials Regulations for proper packaging; marking, labeling, handling, and documentation.

6.9 HAZARDOUS COMMUNICATION (HAZCOM)

The Contractor shall develop and implement and maintain a Hazard Communication Plan, to be submitted to OEAM prior to any assignment that requires repairing or removal of any hazardous substance. The contractor shall submit an inventory of all hazardous chemicals that are used on each site. The contractor shall also ensure that all containers that are brought on site for storage (e.g. gas, paint, etc.) are labeled and inspected in accordance with all applicable regulations.

7.0 ENVIRONMENTAL REQUIREMENTS

7.1 ASBESTOS CONTAINING MATERIALS

Asbestos-Containing Building Materials (ACBM) and Potential Asbestos Containing Materials (PACM) may be present or encountered at some OEAM sites. The Contractor will inform OEAM of the presence of known ACBM in the work area. Upon discovery of materials suspected to contain asbestos, Contractors must stop work immediately and notify OEAM.

- *The Contractors' shall have an Asbestos and Demolition License available;
- *The Contractors' shall not break or crush asbestos sheeting;
- *The Contractors' must use water spray to minimize asbestos dust;
- *The Contractors' employees must wear a respirator as necessary;
- *The Contractors' must double wrap asbestos sheeting in plastic and clearly label;
- *The Contractors' must deliver asbestos waste to a recognized Waste Management Facility;
- *The Contractors' must manage and remove asbestos in strict accordance with the Occupational Health and Safety Regulations. Insulating materials shall be presumed to be asbestos containing material until a laboratory analysis determines material to be non-asbestos, or the material is labeled non-asbestos.

7.2 EXAMPLES OF MATERIALS THAT CAN CONTAIN ASBESTOS INCLUDE BUT IS NOT LIMITED TO:

Pipe insulation, pipe coating boiler skin, gaskets, packing, floor tile, transit panels, roofing materials, cable insulation, wiring, sprayed on insulation, and brake linings. Only trained and qualified personnel can remove or disturb Asbestos Containing Material (ACM). If any Contractors' employee suspects or is unsure as to whether materials contain asbestos, they are to immediately contact their supervisor for clarification.

7.3 REMOVING OR DISTURBING ASBESTOS

Asbestos Containing Material (ACM) or Potential Asbestos Containing Material (PACM) is removed or disturbed, the amount and reason for the work will determine which of four classes and the related work practices and training that will be required. DO NOT enter an asbestos regulated area unless you are trained and meet the requirements for entry.

7.3.1 SIGNS AND LABELS

Regulated areas will have "danger asbestos" signs any disposal bags containing ACM/PACM shall be double bagged and labeled.

7.3.2 TRAINING AND CERTIFICATIONS

Personnel must successfully complete the appropriate level and frequency of training to be able to abate and handle ACM/PACM, and must carry the original license card on their person.

7.4 LEAD

Contractors must contact OEAM to arrange for testing before beginning work that involves the disturbance (e.g., grinding, sanding, welding) of painted surfaces or areas that may contain lead.

7.5 MOLD REMEDIATION

This section provides guidance for contractors and employees who may encounter moldy or potentially moldy building materials. This section is first designed to prevent mold growth and second to ensure compliance during mold remediation activities. The following are EPA guidelines on how to prevent excessive mold growth from becoming a problem in City sites.

- Perform regular building/HVAC inspections and maintenance as scheduled;
- Clean and dry, wet or damp spots within 48 hours;
- Store all raw building materials to prevent exposure to precipitation and moisture prior to and during installation;
- Any newly installed materials found to contain excessive moisture must be removed and replaced at the expense of the contractor;
- Repair leaky plumbing and leaks in the building as soon as possible;
- Watch for condensation and wet spots, repair source(s) of moisture problem(s) as soon as possible;

- Prevent moisture due to condensation by increasing surface temperature or reducing the moisture level in air (humidity). To increase surface temperature, insulate or increase air circulation. To reduce the moisture level in air, repair leaks, increase ventilation (if outside air is cold and dry), or dehumidify (if outdoor air is warm and humid);
- Keep heating, ventilation, and air conditioning (HVAC) drip pans clean, flowing properly, and unobstructed;
Maintain low indoor humidity, below 60% relative humidity (RH), ideally 30-50%, if possible;
Don't let foundations stay wet. Provide drainage and slope the ground away from the foundation; and
Minimize the use of wet extraction machines on carpets during humid seasons (i.e. summer).

The following are EPA guidelines on how to safely investigate and evaluate mold and moisture problems.

- Contact the Office of Environmental, Health, Safety and Security if a mold problem is expected or found;
- Do not touch mold or moldy items with bare hands;
- Do not get mold or mold spores in your eyes;
- Do not inhale mold or mold spores;
- Consider using PPE when disturbing mold. The minimum PPE is a N-95 respirator, gloves, and eye protection; and
- Consult Table 2 of the EPA's guideline for "Mold Remediation in Schools and Commercial Buildings" for Personal Protective Equipment (PPE) and containment guidelines.

7.6 REFRIGERANT GASES (CFCS)

It shall be the contractor's responsibility to collect Refrigerant Gases in specially sealed cylinders by a licensed waste disposal contractor. These CFCs are not to be released into the atmosphere as they are strong ozone depleting agents. CFC's and HCFC's must be recovered from air conditioning units during servicing or decommissioning.

7.7 PAINT STORAGE AND HANDLING

Painting operations can present significant hazards to both the painters and fellow workers in the work area. Specific precautions must be taken to control hazards when painting activities are in progress. If the surface to be painted requires preparation, determine if the current coating contains lead or if the material it is applied to contains asbestos. If either lead or asbestos is present, take the necessary precautions.

Flammable solvents or paints shall be handled only in approved safety containers and shall be properly identified and labeled. Brush or roller applications of paint shall be used when practical. Spray painting shall be used only after administrative and engineering controls are established. Any confined area where spray painting, or surface treating or cleaning with solvents is being done shall be properly ventilated and guarded against all sources of ignition including smoking, welding, and burning. Do not strike matches or go near open flame while

wearing clothing contaminated with flammable substance. Do not use gasoline as a cleaning or degreasing agent.

7.8 PRECAUTIONS WITH SOLUTIONS AND SOLVENTS

Kerosene, Naptha and other petroleum solvents are combustible liquids. When using these materials, particularly in spray or atomizing equipment, be sure there are no open flames or sparks in the vicinity. The work area shall be well ventilated. Sparks and flames must be kept well away from areas where acetone is used and stored. The quantity of acetone kept outside of designated storage areas must be no more than is immediately needed. Containers of acetone must be kept tightly closed when not in use. Transport small quantities of solvent only in approved, properly marked, safety containers. The container may require a grounding system to dissipate static charges.

7.9 FLUORESCENT LIGHT BULBS, ELECTRONIC AND PCB-CONTAINING BALLAST

Contractors removing fluorescent light bulbs are responsible for packaging the bulbs and ballasts, and delivering them to an on-site area designated by OEAM for recycling or disposal.

7.10 INDOOR AIR QUALITY

Contractors must contact OEAM before beginning activities that are likely to generate odors in or near occupied areas or building air intakes (e.g., use of paints, adhesives, and combustion engines or other odor-producing chemicals or processes). Additional ventilation or other process controls must be initiated to prevent buildup of vapors or gases that could result in health hazards, fire hazards, or nuisance odors.

7.11 WATER POLLUTION

It is against the law to place any material (other than clean water) in a position where it is likely to leak, fall or be blown into any drain or gutter that is used to receive rainwater. Allowing this to occur can result in an on-the spot fine or legal actions against a business or an individual.

7.12 EROSION AND SEDIMENT CONTROL

Contractors allowing material to enter a waterway or even leaving the material where it can be washed off-site could expect fines or legal actions. Soil, sand, cement and many other pollutants can be washed into waterways-harming wildlife and causing an array other problems.

7.13 STORM WATER SYSTEMS

Prior to starting any project the contractor is responsible for obtaining the proper storm water permit; develop site specific Storm Water Pollution Prevention Plan (SWPP) and implementing appropriate best management practices. The contractor must post the EPA Permit Number or the Notice of Intent (NOI). The contractor must provide a copy of the completed NOI and the Storm Water Pollution Prevention Plan to OEAM prior to any assignment.

7.14 CONTAMINATED SOILS

Soils may be contaminated with oil, asbestos, cyanide, heavy metals or any toxic material. OEAM must be informed about any incidence of soil contamination that may occur or be discovered. Contractors must contact a licensed waste disposal contractor to collect and remove contaminated soil in an approved container; such removal must be authorized by OEAM.

7.15 DECONTAMINATION

Some City facilities may contain process piping, process ductwork, and process tools that carry or contain hazardous materials. Decontamination verification must be completed before the pipes, ductwork, and/or process tools are removed from the site.

7.16 REGULATIONS

Clean Air Act regulates emissions of pollutant in the atmosphere include hydrocarbon vapors, emissions by treatment technology, unless air quality requires stricter limits.

Clean Water Act regulates the discharge of waste to receiving.

Resource Conservation and Recovery Act (RCRA) regulates generation, manifesting, transportation, storage, treatment and disposal of hazardous solid wastes, storage of fuels in underground tank.

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) regulates the cleanup of leaking landfills, reporting spills of certain chemicals, the responsibility and liability for contaminated disposal cleanup.

Superfund Amendment and Reauthorization Act (SARA Title III) regulates emergency response plans, right to know issues, and chemical release reporting.

Occupational Safety and Health Act (OSHA) regulates employees' right to know, responsible for keeping work area free of hazards, specific procedures for job and industry safety.

Toxic Substances Control Act (TSCA) regulates commercial use of most chemical use disposal of Asbestos, PCB, CFCs, reporting all adverse health effects, use labeling, and documentation for chemicals that pose a risk to health or the environment. The law requires you to report any incident that you believe fits the description of possibly causing significant damage to human health or environment. That information should be reported to OEAM included the following:

- An illness or death associated with the use of products or related to chemicals used at a work location;
- Pattern of illness occurring among employees or customers;
- Results of laboratory experiments test which indicate potential adverse health, and environmental effects that may occur; and
- Spills or widespread contamination of chemicals not covered by other reporting regulations.

Hazardous Materials Transportation Act regulates hazardous material transported in commerce, activities associated with identifying and classifying hazardous material marking, labeling, placarding and packaging the material, and documentation of material, loading, unloading, incidental storage of hazardous material and reporting unintentional releases.

Safe Drinking Water Act regulates enforces quality procedures for drinking water.

8.0 SAFETY REQUIREMENTS

8.1 SAFE PERFORMANCE SELF-ASSESSMENT

ASSESS THE RISK;

What could go wrong?

What is the worst thing that could happen, if something goes wrong?

ANALYZE HOW TO REDUCE THE RISK

Do I have all the necessary training and knowledge to do this job safely?

Do I have all the proper tools and personal protective equipment?

ACT TO ENSURE SAFE OPERATIONS

Take necessary actions to make sure the job is done safely!

Follow written procedures!

Ask for assistance, if needed

8.2 SAFETY SIGNS IN THE WORKPLACE

Warning signs and safety instructions have become a part of ever day life in recent years and more so in the workplace. Workplace safety signs are simply markings placed by employers that identify s specific risk, hazards or other safety-related issues. Signs are used to warn employees and member of the public about dangerous substances like acid, or to point out fire exits. They also give general information or specific instructions about equipment that must be worn in designated areas. Some signs must be displayed as part of the health and safety rules to reduce risk while some industries carry other more specific requirements.

8.3 FIRE PROTECTION AND DETECTION SYSTEMS

When welding, cutting or grinding, follow established hot work procedures, including fire watch. Flammable and combustible liquids must be stored in proper containers and handled in accordance with regulatory requirements for bonding and grounding. Accumulations of combustible trash (oily rags, paper) are often prime spots for fire ignition and are not permitted by OEAM. It shall be OEAM to maintain fire protection equipment in a fully operational state. Report potential fire hazards to the immediate supervisor. Do not use flame or spark producing tools in areas where combustible gases or dusts exist. Exercise extra caution around coal transfer points due to increased dust levels. Observe all "no smoking" signs; do not obstruct exit doors, stairs or walkways.

8.4 FIRE TRIANGLE

Fuel can be oil or other petroleum products, solid combustibles such as paper, room furnishings or plastic, or natural gas

Ignition may be electrical, hot surfaces, welding sparks, hand tools, discharge static electricity, flashlights or cameras. Attention to hot work permitting and observation of electrically classified areas are key to keeping sources of ignition away from sources of fuel.

Oxygen is present all around us in the atmosphere these three combinations can be lethal; particularly when performing hot work. Oxygen sources should always be isolated.

8.5 FIRE CLASSES

Class A fires occur with wood, tress, coal, cloth and paper. The most commonly used extinguisher agent is water.

Class B-Fires occur with vapor -air mixture over the surface of flammable and combustible liquids such as, but not limited to grease, gasoline, hydraulic oil, diesel fuel and lubricating oil. The most commonly used fire extinguisher is a dry chemical, a carbon dioxide or water fog extinguishers can also be used.

Class C-Fires occur in electrical equipment where non-conducting extinguisher agent must be used, such as dry chemical, carbon dioxide, and halons are suitable. However carbon dioxide extinguishers are not recommended for outdoor use due to wind dilution. Foam and water conduct electricity and shall not be used to combat electrical fires.

Class D-Fires occur in metal only, involving combustible metal, such as magnesium, sodium, potassium, sodium-potassium alloys, uranium, and powdered aluminum.

Class K-Fires involving cooking oil and grease. These fire extinguishers are kept in kitchen facilities.

8.7 HOT WORK-WELDING, CUTTING AND BRAZING

Contractors must obtain authorization from OEAM prior to work activity and ensure that all safety precautions are met. Contractors must ensure that fire alarms are isolated. Adequate fire protection must be present, with suitable fire extinguishers attached to, or near each welding plant. Welders must use screens to protect all personnel from welding flashes and any waste produced during the welding process.

In addition, the contractor must also maintain the following in accordance with OSHA regulations:

- Proof of Hot Work Permit;
- Remove combustible materials from the area before beginning work;
- Elevate oxygen/acetylene hoses several feet above the work area or otherwise protect them from damage;

- Install anti-flash back (safety/check) valves in both the oxygen/acetylene hoses at the regulator;
- Shield adjacent area with welding partitions; and
- Have a second person stand by with an approved fire extinguisher for welding and burning operations.

8.8 TOXIC FUMES

Welding can create toxic fumes. Make sure you have proper ventilation. Keep as much distance as possible between the welding plume and your face. Wear the appropriate PPE. Check the MSDS for the welding rod and components to be used. Remove any paint before welding, burning, or grinding. Remove any degreasers – when welded, chlorinated degreasers can produce phosgene gas, which is extremely toxic.

8.9 CONFINED SPACE

- A confined space is an area with limited or restricted means of entry or exit that a person can actually enter with their body and that is not designed for continuous human occupancy. Working in these areas requires special training, precautions and permitting. No worker shall enter an area meeting the definition of confined space unless properly trained and authorized. Work that is performed in all of the sites under the purview of the Office of Facilities will conform to the appropriate OSHA standards. Contractors must ensure that fume evacuation, airflow and exchanges of air are all maintained as necessary; confined space gas detection equipment must be used to test the environment.

8.10 LOCKOUT TAG OUT (LOTO)

The contractor is responsible for developing, implementing and maintaining his/her own Lockout/Tagout Program in accordance with OSHA regulations as it applies to the work of their contract. Contractors shall submit a copy of its Lockout/Tagout Program to OEAM before the start of any work. Unless otherwise directed, OEAM will shut down and start up utility systems.

ENERGY SOURCES

There are several energy sources, all of them may be locked and tagged. The list includes:

- *Electrical
- *Hydraulic
- *Pneumatic
- *Chemical
- *Thermal

8.11 DANGER & OUT OF SERVICE TAGS

OEAMs staff will use the tagging system in accordance with procedures when necessary. OEAM shall provide the 'Danger' and 'Out of Service' tags and use as follows:

For your own protection:

- Isolate all equipment, switches and controls required to ensure your work-site is safe.]

- Place your tag(s) on all electrical switches and switchboards, other appropriate switches, valves, main isolators or key rings.
- Leave other tags alone. Never remove someone else's danger tag.
- Do not operate switches, valves or equipment that displays a 'Danger' tag or 'Out of Service' tag.

Change 'Danger' Tags to 'Out of Service' Tags:

If the equipment is still not safe at the end of the shift, the 'Danger' tag must be changed to an 'Out of Service' tag.

8.12 PROTECTIVE BARRIERS

Protective barriers material may be rope, railings, baffles, caps, barricades, or walls. Protective barriers shall be placed at such a height and position as to prevent personnel from entering areas that are hazardous. The erection of the barrier must take into account the physical layout of the equipment, the nature of adjoining equipment, aisle ways, thoroughfares, and operating equipment. Barriers should be placed:

- A minimum of 10 feet from open excavations greater than 5 feet deep; otherwise, a minimum distance equivalent to depth of the excavation.
- A minimum of 10 feet from overhead work on scaffolds or ladders.
- A distance from the hazard sufficient that a fall at the barrier rope will not result in the individual coming in contact with the hazard. **Never use safety rope for other than its intended purpose.** OEAM will be responsible for placing or removing industrial safety barriers.

8.13 EXCAVATION & TRENCHING

Excavation is any man-made cut, cavity or depression in the earth's surface formed by earth removal. All excavation must be adequately shored and safe access must be provided in all excavations. Contractors must have written authorization for OEAM prior to any excavation work, obtain drawings of the services located in the area.

8.14 ELECTRICAL SAFETY

Only qualified electricians are permitted to work on electrical systems and equipment that uses or controls electrical power. All work shall be conducted in accordance with the National Fire Protection Agency 70E standard for Electrical Safety in the work place. Contractors must not operate electrical tools or equipment in wet areas or areas where potentially flammable dust, vapors, or liquids are present, unless written authorization is obtained from the OEAM. Contractors should erect barriers and post warning signs to ensure non-authorized personnel stay clear of the work area.

8.15 LADDERS

The location of the ladder and the type of work activity may require additional safety requirements. For example, a ladder positioned next to an opening would require fall protection. The type of work and the work environment also dictates the type of ladder to be used, (e.g., metal ladders shall not be used where there is an electric shock potential.) Ladders must be

inspected for wear or damage prior to use. Ensure the ladder is used as intended and within the designated specifications. Avoid overhead obstructions when setting up a ladder. Ensure all ladders have appropriate feet and rest on a solid base. Position the ladder properly. Good rules of thumb for ladder positioning are the use of the palm test.

- Stand with your arms out straight ahead
- Place your toes against the bottom of the ladder
- Make sure your palms touch the shoulder level rung
- Place a ladder one foot out from a vertical surface for every four feet of ladder height.
- Stabilize a straight/extension ladder with a tie off near the upper support unless a co-worker stabilizes the ladder.
- Keep a three-point contact when climbing or working on a ladder.

8.16 FALL PROTECTION

Full body harnesses with shock-absorbing lanyard of less than six feet or retractable lanyard of any length are to be used where fall protection is required by governmental regulations. Fall protection equipment is to be inspected prior to use. The equipment must be free of rips, tears, nicks, and deterioration. Lanyard snap hooks (double release type only) must work properly. At a minimum, use when working more than 4 feet (General Industry Standard) or 6 feet (Construction Standard) above the floor/ground, while having no handrails or means for eliminating a fall potential. Additionally, working/moving from a manlift, bucket truck, or boom requires the use of fall protection. The lanyard is to be fastened to approved fall protection points only. To assure your safety, attach the lanyard only to:

- Lines installed specifically for fall protection purposes
- Approved structural materials
- Connection points on lifts or buckets
- Scaffolds specifically designed to handle a fall protection device
- A lanyard must be hooked according to the manufacturer's recommendations.

8.17 FORKLIFT OPERATION

Contractors operating forklifts shall have training and a valid license. Contractors are not allowed to use Office of Facilities Management forklifts. The use of internal combustion engine equipment (propane, diesel) indoors is discouraged.

Do not operate forklifts if certification has expired. When parked, keep the forks or platform in the lowered position. When traveling, forklifts or platforms must be in a lowered position. Never allow anyone to stand on or pass under elevated forklifts. Wear the seat belt provided.

8.18 SAFE MOBILE CRANE OPERATION

It is mandatory that personnel who operate mobile cranes be trained on the crane to be operated. Operators must be qualified on the cranes and the aerial lifts that they operate and know the clearance requirements for working near overhead-energized lines. All other employees must be

familiar with basic crane safety and also be aware of clearance requirements when directing crane movements.

8.19 HAND TRUCK SAFETY

Never overload hand trucks or dollies and always be sure the load is properly balanced and is safe to move without fear of tipping or turning over. If needed, secure the load with bungee straps, strap and ratchets, chains or similar devices.

8.20 OVERHEAD WORK

At the beginning of each job, before initially going on any roof, tank or vessel roof, OEAM must be notified. Contractor must assess the condition of the roof prior to performing work and must evaluate potential exposure to electrical utilities. Certain roofs present special hazards due to their inability to bear weight. Contractors must determine additional safety practices when structural weaknesses are suspected regardless of the materials of construction. Safety harness and fall protection systems must be worn while on any roof. Contractor must submit a detailed safety plan to OEAM prior to any roof repairs. Under no circumstance will debris or material be thrown or dropped from any roofs under OEAM purview. When working overhead, the area below must be roped off with appropriate signage or other equivalent measures taken to protect workers in the area.

8.21 LASERS AND RADIATION SAFETY

Lasers and radiation may only be used by persons who have completed a recognized course. Radiation-producing equipment includes but is not limited to gauges installed in power plants that detect the presence or absence of coal or water, portable gauges used by construction inspectors, radiography cameras used by licensed Contractors, and other laboratory instrumentation. All radiation areas shall be roped off and marked conspicuously with signs that bear the radiation symbol and the words "caution – radiation area." The barrier rope shall be magenta and yellow.

Contractors shall only use power tools that are double insulated or equipped with grounded power cords. Ground Fault Interrupters (GFI) or other similar devices shall be used in wet or damp locations.

8.23 POWDER ACTUATED TOOLS

Contractors who operate powder-actuated tools must be properly trained in their use and carry a valid operator's card provided by the equipment manufacturer. Each powder-actuated tool must be stored in its own locked container when not being used. A sign at least 7 inches by 10 inches with bold face type reading "POWDER-ACTUATED TOOLS IN USE" must be conspicuously posted when the tool is being used. Powder-actuated tools must be left unloaded until they are actually ready to be used. Powder-actuated tools must be inspected for obstructions or defects each day before use. All Powder-actuated tool operators must have and use appropriate personal protective equipment such as hard hats, safety goggles, safety shoes and ear protectors.

8.24 SCAFFOLD SAFETY

When erecting scaffolds at a height greater than four feet personnel will use appropriate fall restraint equipment. Only trained and qualified personnel shall erect, modify or tear down scaffolds. Scaffolding shall be erected so as not to interfere with equipment. Scaffolding shall be sized to provide adequate working space for personnel and the task(s). Toe boards and mid and top guard rails shall be installed on scaffolds. Scaffolds over or near a walkway shall be securely screened from the toe board to the top guardrail. A scaffold shall not be used unless recently inspected and a scaffold inspection tag is attached and verified before each shift. All scaffolds will be assembled using construction grade, medium quality scaffolding. Access to scaffold platforms shall not require climbing over guardrails.

8.25 WINDOW WASHING SAFETY

Window washing shall be conducted using suspended scaffolds (single or two points), a boatswain's chair, or other OSHA compliant method. Scaffolding apparatus shall comply with the requirements of 29 CFR 1910.28. Window washing anchors located on any Office of Facilities Management building shall be verified by the window washing contractors. All reports or inspections of anchor points shall be provided to OEAM.

8.26 OBSTRUCTIONS

Access to building entrances, lobbies, corridors, aisles, stairways, doors and exits must be kept free and clear during normal work hours. Access to emergency equipment must be maintained at all times. Contractors must not move or relocate emergency equipment without written approval from OEAM.

CITY OF ATLANTA
SMALL BUSINESS ENTERPRISE
POLICY STATEMENT

It is the policy of the City of Atlanta to promote full and equal business opportunity for all persons doing business with the City. The City must ensure that firms seeking to participate in contracting and procurement activities with the City are not prevented from doing so on the basis of size as it relates to revenue and number of employees. The purpose of the Small Business Enterprise Program is to ensure that the City of Atlanta has a robust race-neutral approach to promoting full and equal business opportunity for all persons doing business with the City of Atlanta, to promote commerce by assisting SBEs to actively participate in the City's procurement process, and ensure that the City of Atlanta utilizes programs that provide it with the best possible resources. SBE Goals for this project are set forth on page 6.

Implementation of SBE Policy

The Office of Contract Compliance will review information submitted by Bidders pertaining to efforts to promote opportunities for small businesses to compete for business as prime contractors, subcontractors and/or Suppliers. A Bidder is eligible for award of a City contract upon a finding by OCC that the Bidder has utilized good faith efforts to attract all businesses regardless of size. To assist prime contractors in this effort, the Office of Contract Compliance has set forth in this solicitation document the SBE goals within the relevant NAICS Codes, for this Project.

For subcontracting, the SBE Project Participation Plan must include all subcontractors to be utilized on the project, detail the services to be performed, the dollar value of the work to be performed by each subcontractor, and the City of Atlanta SBE or other acceptable certification number, and supplier id number.

For Suppliers, the Subcontractor Project Plan must include all suppliers to be utilized on the project, the supplies to be provided, including the dollar value of the supplies being provided and the City of Atlanta SBE or other acceptable certification number, and supplier id number.

Determination of Good Faith Efforts During Bid Process

No Bidder shall be awarded a contract on an Eligible Project unless the Office of Contract Compliance determines that the Bidder has satisfied the requirement of section 2-1372 on such Eligible Project. Accordingly, each Bidder shall submit with each Bid the following:

1. Covenant of Non Discrimination. Each Bidder shall submit with her/his Bid a Covenant of Non-Discrimination which is set forth herein as Exhibit SBE1.
2. Outreach Efforts Documentation. Each Bidder shall submit with her/his Bid written documentation demonstrating the Bidder's outreach efforts to identify, contact, contract with, or utilize businesses, including certified SBEs, as subcontractors or Suppliers on the Eligible Project. This information shall be set forth on Exhibit SBE2, which is included herein.
3. SBE Project Participation Plan. Each Bidder shall submit with her/his Bid a completed and signed SBE Project Participation Plan, which is included herein as Exhibit SBE3, which lists the name, address, telephone number and contact person of each subcontractor or other business to be used during the contract, the NAICS Code and the type of work or service each business will perform, the dollar value of the work and the scope of work, certification number of each business, and any other information requested by the Office of Contract Compliance. In order for the Office of Contract Compliance to officially consider a firm to be an SBE firm, it must be certified by or have a certification application pending with the Office of Contract Compliance at the time of the Bid.

OCC Review of Bidder Submissions

The Office of Contract Compliance shall determine whether a Bidder has satisfied the good faith efforts requirement of section 2-1372 based on its review of the Covenant of Non Discrimination, the Outreach Efforts Documentation, the SBE Project Participation Plan, and its review of other relevant facts and circumstances. In reviewing the documents submitted by a Bidder to determine whether the Bidder has satisfied the good faith outreach practices requirement of this section, the Office of Contract Compliance will consider, among other things, the total project dollars subcontracted to or expended for services performed by other businesses, including certified SBEs, whether such businesses perform Commercially Useful Functions in the work of the contract based upon standard industry trade practices, whether any amounts paid to Supplier businesses are for goods customarily and ordinarily used based upon standard industry trade practices, and the availability of certified SBEs within the relevant NAICS Codes for such Eligible Project.

To determine whether a competitor that has failed to meet SBE goals may be awarded the contract, the city will determine whether the efforts the bidder made to obtain SBE participation were "good faith efforts." Efforts that are merely pro forma are not "good faith efforts" to meet the goals. In order to award a contract to a bidder that has failed to meet SBE contract goals, the Office of Contract Compliance will determine whether the bidder actively and aggressively made efforts to meet the City's SBE goals. A bidder making a good faith effort would consider a number of factors in negotiating with subcontractors, including SBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration. However, the fact that there may be some additional costs involved in finding and using SBEs is not in itself sufficient reason for a bidder's failure to meet the contract SBE goal, as long as such costs are reasonable. Also, the ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder of the responsibility to make good faith efforts. Prime contractors are not, however, required to accept higher quotes from SBEs if the price difference is excessive or unreasonable. In determining whether a bidder has made good faith efforts, the Office of Contract Compliance will take into account the performance of other bidders in meeting the contract. For example, when the apparent successful bidder fails to meet the contract goal, but others meet it, the Office of Contract Compliance may reasonably raise the question of whether, with additional reasonable efforts, the apparent successful bidder could have met the goal. If the apparent successful bidder fails to meet the goal but meets or exceeds the average SBE participation obtained by other bidders, the City may view this, in conjunction with other factors, as evidence of the apparent successful bidder having made good faith efforts. Competitors that fail to meet SBE goals and fail to demonstrate "good faith efforts" shall be deemed non-responsive to the city's SBE requirements and shall not be eligible to be awarded the contract.

Small Business Enterprise Program Bid/RFP Submittals

The Covenant of Non Discrimination, the Outreach Efforts Documentation, the SBE Project Participation Plan, and any other information required by OCC in the solicitation document must be completed in their entirety by each Proponent and submitted with the other required Bid/RFP documents in order for the Bid/RFP to be considered responsive. Failure to timely submit these forms, fully completed, will result in the Bid/RFP being considered as non-responsive, and therefore, excluded from consideration.

Monitoring Of SBE Policy

Upon execution of a contract with the City of Atlanta, the successful bidder's SBE Project Participation Plan will become a part of the contract between the bidder and the City of Atlanta. The SBE Project Participation Plan will be monitored by the City of Atlanta's Office of Contract Compliance for adherence with the plan. The successful bidder will be required to provide specific information on a monthly basis that demonstrates the use of subcontractors and suppliers as indicated on the SBE Project Participation Plan. The failure of the successful bidder to provide the specific information by the specified date each month shall be sufficient cause for the City to evoke penalties as set forth in the City of Atlanta Code of Ordinances, Section 2-1373.

Implementation of EEO Policy

The City effectuates its EEO policy by adopting racial and gender work force availability for every contractor performing work for the City of Atlanta. These percentages are derived from the work force demographics set forth in the 2000 Census EEO file prepared by the United States Department of Commerce for the applicable labor pool normally utilized for the contract.

Monitoring of EEO Policy

Upon award of a contract with the City of Atlanta, the successful bidder must submit a Contract Employment Report (CER), describing the racial and gender make-up of the firm's work force. If the CER indicates that the firm's demographic composition does not meet the adopted EEO goals, the firm will be required to submit an affirmative action plan setting forth the steps to be taken to reach the adopted goals. The CER and the affirmative action plan, if necessary, will become a part of the contract between the successful bidder and the City of Atlanta. Compliance with the EEO requirements will be monitored by the Office of Contract Compliance.

First Source Jobs Program Policy Statement

It is the policy of the City of Atlanta to provide job opportunities to the residents of the City of Atlanta, whenever possible. Every contract with the City of Atlanta creates a potential pool of new employment opportunities. The prime contractor is expected to work with the First Source Jobs Program to fill at least 50% of all new entry-level jobs, which arise from this project, with residents of the City of Atlanta.
